API Collection

# XML Processing and Modeling

Parse XML documents.

## Topics

### Tree-Based Processing

`class` **XMLDTD**

A representation of a Document Type Definition.

`class` **XMLDTDNode**

A representation of element, attribute-list, entity, and notation declarations in a Document Type Definition.

`class` **XMLDocument**

An XML document as internalized into a logical tree structure.

`class` **XMLElement**

The element nodes in an XML tree structure.

`class` **XMLNode**

The nodes in the abstract, logical tree structure that represents an XML document.

### Event-Based Processing

`class` **XMLParser**

An event driven parser of XML documents (including DTD declarations).

`protocol` **XMLParserDelegate**

The interface an XML parser uses to inform its delegate about the content of the parsed document.
