Discussion

A `count` generation guide may be used when you want to ensure the model produces exactly a certain number array elements, such as the number of items in a game's shop.

```swift
@Generable
struct struct Shop {
    @Guide(description: "A creative name for a shop in a fantasy RPG"
    var name: String

    @Guide(description: "A list of items for sale", .count(3))
    var inventory: [ShopItem]
}
```
