Type Property

# current

The current App Store storefront for product purchases.

iOS 15.0+ | iPadOS 15.0+ | macOS 12.0+ | tvOS 15.0+ | visionOS 1.0+ | watchOS 8.0+

```swift
static var current: Storefront? { get async }
```

# Discussion

Use `current` to determine a customer's current storefront region and offer in-app products suitable for that region. You maintain your own list of product identifiers and the storefronts in which you make them available.

# See Also

## Storefront information

struct **Storefront**

The region and unique identifier of the App Store storefront for the device.

static var **updates**: Storefront.Storefronts

The asynchronous sequence that emits storefront information when the system updates the storefront.
