Protocol

EntityStringQuery

An interface that locates entities using arbitrary string input.

iOS 16.0+ | iPadOS 16.0+ | Mac Catalyst | macOS 13.0+ | tvOS 16.0+ | visionOS | watchOS 9.0+

```
protocol EntityStringQuery : EntityQuery
```

Mentioned in

📄 Integrating custom data types into your intents

Overview

EntityStringQuery adds to a <u>EntityQuery</u> the ability to query instances by `String`. The `String` value against which entities are matched typically represents the name a user would use to refer to a particular instance.

Topics

Searching for entities

```
func entities(matching: String) async throws -> Self.Result
```
    Retrieves instances by string.
