Object

RefundLookupResponse Deprecated

A response that contains an array of signed JSON Web Signature (JWS) transactions.

App Store Server API 1.1–1.6 `Deprecated`

```
object RefundLookupResponse
```

> **Deprecated**
>
> Use Get Refund History and its response, RefundHistoryResponse, instead.

Properties

~~signedTransactions~~
[`JWSTransaction`]

`Deprecated` A list of JWS transactions, or an empty array if the customer has received no refunds in your app. The transactions are sorted in ascending order by their revocationDate.

Mentioned in

📄 App Store Server API changelog

Discussion

If the customer hasn't received any refunds for in-app purchases in your app, the `signedTransactions` array is empty. To read the transaction information, decode the payload for each JWSTransaction object in the `signedTransactions` array. Use a JWSTransaction DecodedPayload object to read the transaction information in the payload.

This response can contain a maximum of 50 transactions in the `signedTransactions` array.

See Also

Deprecated

~~Get Transaction History V1~~

Get a customer's in-app purchase transaction history for your app, except finished consumable in-app purchases.

Deprecated

~~Get Refund History V1~~

Get a list of up to 50 of a customer's refunded in-app purchases for your app.
