Class

EntityProperty

A property wrapper that exposes the associated property to the system.

iOS 16.0+ | iPadOS 16.0+ | Mac Catalyst | macOS 13.0+ | tvOS 16.0+ | visionOS | watchOS 9.0+

```
@propertyWrapper
final class EntityProperty<Value> where Value : _IntentValue, Value : Sendable
```

Topics

Initializers

convenience init()

Creates an app intent entity property.

convenience init()

Creates an app intent entity property.

convenience init()

Creates an app intent entity property.

convenience init()

Creates an app intent entity property.

`convenience init()`

    Creates an app intent entity property.

`convenience init()`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`

    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience init(customIndexingKey: CSCustomAttributeKey)`
    Creates an app intent entity property.

`convenience` `init(customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property.

`convenience` `init(customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property.

`convenience` `init(customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property.

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier:` `String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, asyncGetter: (Entity) async throws -> Value)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, asyncGetter: (Entity)
async throws -> Value)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, customIndexingKey: CSCustom
AttributeKey)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, customIndexingKey: CSCustom
AttributeKey)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, customIndexingKey: CSCustom
AttributeKey)
```

> Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, customIndexingKey: CSCustom
AttributeKey)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience` `init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, customIndexingKey: CSCustomAttributeKey)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, customIndexingKey: CSCustom
AttributeKey)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, customIndexingKey: CSCustom
AttributeKey)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, customIndexingKey:
CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey: CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, customIndexingKey:`
`CSCustomAttributeKey, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

convenience init(identifier: String, indexingKey: PartialKeyPath< CSSearchableItemAttributeSet>)

convenience init(identifier: String, indexingKey: PartialKeyPath< CSSearchableItemAttributeSet>)

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

convenience init(identifier: String, indexingKey: PartialKeyPath< CSSearchableItemAttributeSet>)

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

convenience init(identifier: String, indexingKey: PartialKeyPath< CSSearchableItemAttributeSet>)

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)

convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity,
Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or
@DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getSetter: WritableKeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKey Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init<Entity>(identifier: String, indexingKey: PartialKey
Path<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init<Entity>(identifier: String, indexingKey: PartialKeyPath<CSSearchableItemAttributeSet>, getter: KeyPath<Entity, Value>)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, title: LocalizedStringResource)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

`convenience init(identifier: String, title: LocalizedStringResource)`

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```
Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)
```

Creates an app intent entity property. Do not call this directly, use @ComputedProperty or @DeferredProperty

```
convenience init(identifier: String, title: LocalizedStringResource)

CSCustomAttributeKey)
```
    Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, customIndexingKey:
CSCustomAttributeKey)
```
    Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, customIndexingKey:
CSCustomAttributeKey)
```
    Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, customIndexingKey:
CSCustomAttributeKey)
```
    Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
    Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
    Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
    Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```

Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
     Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
     Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
     Creates an app intent entity property.

```
convenience init(title: LocalizedStringResource, indexingKey: Partial
KeyPath<CSSearchableItemAttributeSet>)
```
     Creates an app intent entity property.

Instance Properties

```
var projectedValue: EntityProperty<Value>
```

```
var wrappedValue: Value
```

Relationships

Conforms To

```
AnyIntentValue
Copyable

See Also

Entity content

protocol `AppValue`

An interface that describes conceptual types you use in app intents.

protocol `AnyIntentValue`

A type the system uses to access a parameter or property value.

protocol `AppEnum`

An interface to express that a custom type has a predefined, static set of valid values to display.

protocol `URLRepresentableEnum`

An app enum with a URL representation.
