Foundation / NSMetadataQueryDelegate

Protocol

NSMetadataQueryDelegate

An interface that enables the delegate of a metadata query to provide substitute results or attributes.

iOS 2.0+ | iPadOS 2.0+ | Mac Catalyst 13.0+ | macOS 10.0+ | tvOS 9.0+ | visionOS 1.0+ | watchOS 2.0+

```
protocol NSMetadataQueryDelegate : NSObjectProtocol
```

Topics

Getting Query Results

```
func metadataQuery(NSMetadataQuery, replacementObjectForResultObject:
NSMetadataItem) -> Any
```

Returns a different object for a given query result object.

```
func metadataQuery(NSMetadataQuery, replacementValueForAttribute:
String, value: Any) -> Any
```

Returns a different value for a given attribute and value.
