Property List Key

IOUserClass

The name of your driver's main class, which is the entry point for interacting with your driver's code.

macOS 10.14+

Details

Type
String

Discussion

Include this key only in the personality dictionary of a DriverKit extension, and use it to specify the name of the custom `IOService` subclass that provides your driver's behavior. When it's time to load your driver, the system instantiates the specified class and begins the initialization and startup processes.

See Also

Driver Classes

`IOProviderClass`

The name of the class that your driver expects to provide the implementation for its provider object.

`IOClass`

The name of the class to instantiate from your driver.

IOUserClientClass

The name of the class to instantiate when the system requires a client connection to the driver.

IOUserServerName

The name that the system uses to facilitate communication between your driver and other clients.
