Object

SubscriptionMigrateRenewalItem

The item information that replaces a migrated subscription item when the subscription renews.

Advanced Commerce API 1.1+

```
object SubscriptionMigrateRenewalItem
```

Properties

SKU SKU	**(Required)** The SKU that the subscription item renews to at the next renewal period. Maximum length: 128
description description	**(Required)** The description of the renewing SKU. Maximum length: 45
displayName displayName	**(Required)** The display name of the renewing SKU. Maximum length: 30

Discussion

If you migrate a subscription that is to renew to another SKU, provide the item that is to renew in the `SubscriptionMigrateRenewalItem`.

For example, if a customer downgrades a subscription, the subscription continues unchanged until the end of the billing period, and downgrades when it renews. If you migrate a subscription in this state before the end of the billing period, you need to provide the item that renews.

See Also

Migration from the server

`Migrate a Subscription to Advanced Commerce API`

Migrate a subscription that a customer purchased through In-App Purchase to a subscription you manage using the Advanced Commerce API.

`object SubscriptionMigrateRequest`

The subscription details you provide to migrate a subscription from In-App Purchase to the Advanced Commerce API, such as descriptors, items, storefront, and more.

`object SubscriptionMigrateResponse`

A response that contains signed renewal and transaction information after a subscription successfully migrates to the Advanced Commerce API.

`object SubscriptionMigrateItem`

The SKU, description, and display name to use for a migrated subscription item.

`object SubscriptionMigrateDescriptors`

The description and display name of the subscription to migrate to that you manage.
