Protocol

GCTouchedStateInput

The common properties for an element that has touch state input.

iOS 16.0+ | iPadOS 16.0+ | Mac Catalyst 16.0+ | macOS 13.0+ | tvOS 16.0+ | visionOS 1.0+

```
protocol GCTouchedStateInput : NSObjectProtocol
```

Topics

Getting change information

`var isTouched: Bool`

A Boolean value that indicates whether the user touches the button.

Required

`var lastTouchedStateTimestamp: TimeInterval`

The time of the most recent touch state change.

Required

`var lastTouchedStateLatency: TimeInterval`

The time in seconds between the last touch state change and the current time.

Required

`var touchedDidChangeHandler: ((any GCPhysicalInputElement, any GCTouchedStateInput, Bool) -> Void)?`

A block that the element calls when its touch value changes.

Required

Getting user actions

`var sources: Set<AnyHashable>`

One or more physical actions the user performs to manipulate the input.

Required
