Object

externalPurchaseToken

The payload data that contains an external purchase token.

App Store Server Notifications 2.10+

```
object externalPurchaseToken
```

Properties

externalPurchaseId
externalPurchaseId

(Required) The unique identifier of the token. Use this value to report tokens and their associated transactions in the Send External Purchase Report endpoint.

tokenCreationDate
tokenCreationDate

(Required) The UNIX time, in milliseconds, when the system created the token.

appAppleId
appAppleId

(Required) The app Apple ID for which the system generated the token.

bundleId
bundleId

(Required) The bundle ID of the app for which the system generated the token.

tokenExpirationDate
tokenExpirationDate

The UNIX time, in milliseconds, when a token expires. This field is present only for custom link tokens.

tokenType
tokenType

The custom link token type, either `SERVICES` or `ACQUISITION`. This field is present only for custom link tokens.

Discussion

The `externalPurchaseToken` object is part of the [responseBodyV2DecodedPayload](#). It's present in the payload when the [notificationType](#) is EXTERNAL_PURCHASE_TOKEN. This notification type applies to apps that use the [External Purchase](#) API to offer alternative payment options.

The `externalPurchaseToken` object is the Base64URL-decoded JSON of the external purchase token your app or website receives when your customer initiates an external purchase. For more information on external purchase tokens, see [Receiving and decoding external purchase tokens](#).

To report tokens with or without associated transactions, call the [Send External Purchase Report](#) endpoint of the [External Purchase Server API](#) from your server.

Topics

External purchase token fields

`type` `externalPurchaseId`

The field of an external purchase token that uniquely identifies the token.

`type` `tokenCreationDate`

The field of an external purchase token that contains the UNIX date, in milliseconds, when the system created the token.

`type` `tokenExpirationDate`

The field of a custom link token that contains the UNIX date, in milliseconds, when the token expires.

`type` `tokenType`

The type of an external purchase custom link token.
