Instance Method

hidden(_:)

Hides a toolbar item within its toolbar.

macOS 15.0+

```
nonisolated
func hidden(_ hidden: Bool = true) -> some ToolbarContent
```

Parameters

hidden

Whether the toolbar item is hidden.

Discussion

Use this modifier to conditionally display a toolbar item in its toolbar.

```
struct ContentView {
    @State private var showDownloads = false

    var body: some View {
        BrowserView()
            .toolbar {
                ToolbarItem {
                    DownloadsButton()
                }
                .hidden(!showDownloads)
            }
    }
}
```

```
}
```
