Structure

ACErrorCode

Codes for errors that may occur.

iOS 5.0+ | iPadOS 5.0+ | Mac Catalyst 13.0+ | macOS 10.8+

```
struct ACErrorCode
```

Topics

Errors

var **ACErrorUnknown:** ACErrorCode

Error code that indicates an unknown error occurred.

var **ACErrorAccountMissingRequiredProperty:** ACErrorCode

Error code that indicates an account wasn't saved because a required property is missing.

var **ACErrorAccountAuthenticationFailed:** ACErrorCode

Error code that indicates an account wasn't saved because authentication of its credential failed.

var **ACErrorAccountTypeInvalid:** ACErrorCode

Error code that indicates an account wasn't saved because its account type is invalid.

var **ACErrorAccountAlreadyExists:** ACErrorCode

Error code that indicates an account wasn't added because it already exists.

var **ACErrorAccountNotFound:** ACErrorCode

Error code that indicates an account wasn't deleted because it couldn't be found.

var **ACErrorPermissionDenied**: `ACErrorCode`

Error code that indicates the operation failed because the application doesn't have permission to perform the operation.

var **ACErrorAccessInfoInvalid**: `ACErrorCode`

Error code that indicates the client's access info dictionary has incorrect or missing values.

var **ACErrorClientPermissionDenied**: `ACErrorCode`

Error code that indicates the client doesn't have access to the requested data.

var **ACErrorAccessDeniedByProtectionPolicy**: `ACErrorCode`

Error code that indicates due to the current protection policy, the credentials couldn't be fetched.

var **ACErrorCredentialNotFound**: `ACErrorCode`

Error code that indicates no credentials were found.

var **ACErrorFetchCredentialFailed**: `ACErrorCode`

Error code that indicates the credentials couldn't be fetched from Keychain.

var **ACErrorStoreCredentialFailed**: `ACErrorCode`

Error code that indicates the credentials couldn't be stored in Keychain.

var **ACErrorRemoveCredentialFailed**: `ACErrorCode`

Error code that indicates the credentials couldn't be removed from Keychain.

var **ACErrorUpdatingNonexistentAccount**: `ACErrorCode`

Error code that indicates an account save failed because the account being updated has been removed.

var **ACErrorInvalidClientBundleID**: `ACErrorCode`

Error code that indicates the client making the request doesn't have a valid bundle ID.

var **ACErrorDeniedByPlugin**: `ACErrorCode`

Error code that indicates a plugin prevented the expected action from occurring.

var **ACErrorCoreDataSaveFailed**: `ACErrorCode`

Error code that indicates an error occurred while trying to save to a Core Data store.

var **ACErrorFailedSerializingAccountInfo**: `ACErrorCode`

Error code that indicates an account's information couldn't be serialized.

var `ACErrorInvalidCommand`: `ACErrorCode`

Error code that indicates an invalid command was attempted.

var `ACErrorMissingTransportMessageID`: `ACErrorCode`

Error code that indicates an expected message identifier wasn't found while performing a command.

var `ACErrorCredentialItemNotFound`: `ACErrorCode`

Error code that indicates a credential item wasn't saved because it couldn't be found.

var `ACErrorCredentialItemNotExpired`: `ACErrorCode`

Error code that indicates a credential item wasn't removed because it hasn't yet expired.

Initializers

`init(UInt32)`

Initializes a new error code structure.

`init(rawValue: UInt32)`

Initializes a new error code structure.

Instance Properties

var `rawValue: UInt32`

The raw integer value of the error code.

Relationships

Conforms To

```
BitwiseCopyable
Equatable
Hashable
RawRepresentable
Sendable
```
