Structure

WASubscriberBrowser.Action

The structure that configures the Wi-Fi Aware subscriber operation the network browser performs.

iOS 26.0+ | iPadOS 26.0+

```
struct Action
```

Overview

The configuration includes the service and devices it operates on.

The WASubscriberBrowser.Action is the first component of the `.wifiAware()` instruction to a `NetworkBrowser`.

The code below is an example of creating a `NetworkBrowser`:

```
NetworkBrowser(for: .wifiAware( .connecting(to:.selected(devices),  from:service) )
```

Topics

Creating a browser

```
static func connecting(to: WASubscriberBrowser.Devices, from:
WASubscribableService) -> WASubscriberBrowser.Action
```

Subscribes to the provided service over Wi-Fi, providing browse results for connecting to the specified paired devices if available.
