Apple Music API / Get Multiple Library Resources Using Resource-Typed ID Parameters

Web Service Endpoint

Get Multiple Library Resources Using Resource-Typed ID Parameters

Fetch one or more library resources by using their identifiers.

Apple Music 1.0+

URL

> **GET** `https://api.music.apple.com/v1/me/library`

Query Parameters

include [string]	Additional relationships to include in the fetch.
l string	The localization to use, specified by a language tag. The possible values are in the `supportedLanguageTags` array belonging to the `Storefront` object specified by `storefront`. Otherwise, the default is `defaultLanguageTag` in `Storefront`.
extend [string]	A list of attribute extensions to apply to resources in the response.
ids[library-songs] [string]	The unique identifiers for the library songs.
ids[library-playlists] [string]	The unique identifiers for the library playlists.

ids[library-playlist-folders] [string]	The unique identifiers for the library playlist folders.
ids[library-music-videos] [string]	The unique identifiers for the library music videos.
ids[library-artists] [string]	The unique identifiers for the library artists.
ids[library-albums] [string]	The unique identifiers for the library albums.

Response Codes

200 ResourceCollection Response	**OK** The request was successful. Content-Type: application/json
401 UnauthorizedResponse	**Unauthorized** A response indicating an incorrect `Authorization` header. Content-Type: application/json
403 ForbiddenResponse	**Forbidden** A response indicating invalid or insufficient authentication. Content-Type: application/json
500 ErrorsResponse	**Internal Server Error** A response indicating an error occurred on the server. Content-Type: application/json

Discussion

If successful, the HTTP status code is 200 (OK) and the `data` array contains the requested resource object. If unsuccessful, the HTTP status code indicates the error and the details are in the `errors` array.

This endpoint requires a music user token. For more information, see User Authentication for MusicKit.

Example

```
https://api.music.apple.com/v1/me/library?ids[library-songs]=i.gelNOzPuL41Lxo
