Class

ABPersonViewController Deprecated

The `ABPersonViewController` class (whose instances are known as **person view controllers**) implements the view used to display a person record (`ABPersonRef`).

iOS 2.0–9.0 `Deprecated` | iPadOS 2.0–9.0 `Deprecated` | Mac Catalyst 13.1–13.1 `Deprecated`

```
@MainActor
class ABPersonViewController
```

> **Deprecated**
>
> Use `init(for:)` instead.

Overview

> **Important**
>
> Person view controllers must be used with a navigation controller in order to function properly.

Subclassing

The `ABPersonViewController` class does not support subclassing.

Topics

Responding to View Controller Interactions

var personViewDelegate: (any ABPersonViewControllerDelegate)?

The person-view controller delegate.

protocol ABPersonViewControllerDelegate

The `ABPersonViewControllerDelegate` protocol declares the interface that must be implemented by ABPersonViewController delegates.

Displaying Person Properties

var displayedPerson: ABRecord

The person displayed by the person view.

var displayedProperties: [NSNumber]?

Identifies the set of properties (such as name or telephone number) of displayedPerson the receiver displays.

var shouldShowLinkedPeople: Bool

Indicates whether the person view should display data from person records that are linked with the person record being displayed.

Configuring Person Views

var addressBook: ABAddressBook?

Optional. The address book from which to obtain the contact to display.

var allowsActions: Bool

Specifies whether the to display buttons for actions such as sending a text message or initiating a FaceTime call.

var allowsEditing: Bool

Specifies whether the user can edit the person's information.

func setHighlightedItemForProperty(ABPropertyID, withIdentifier: ABMultiValueIdentifier)

Specifies whether to highlight a particular property of the displayed person.
