Apple Music API / Get Multiple Catalog Resources Using Resource-Typed ID Parameters

Web Service Endpoint

Get Multiple Catalog Resources Using Resource-Typed ID Parameters

Fetch one or more catalog resources by using their identifiers.

Apple Music 1.0+

URL

> **GET** `https://api.music.apple.com/v1/catalog/{storefront}`

Path Parameters

storefront string	**(Required)** An iTunes Store territory, specified by an ISO 3166 alpha-2 country code. The possible values are the `id` attributes of `Storefront` objects.

Query Parameters

include [string]	Additional relationships to include in the fetch.
l string	The localization to use, specified by a language tag. The possible values are in the `supportedLanguageTags` array belonging to the `Storefront` object specified by `storefront`. Otherwise, the default is `defaultLanguageTag` in `Storefront`.
extend [string]	A list of attribute extensions to apply to resources in the response.
ids[stations] [string]	The unique identifiers for the stations.

ids[station-genres] [string]	The unique identifiers for the station genres.
ids[songs] [string]	The unique identifiers for the songs.
ids[record-labels] [string]	The unique identifiers for the record labels.
ids[ratings] [string]	The unique identifiers for the ratings.
ids[playlists] [string]	The unique identifiers for the playlists.
ids[music-videos] [string]	The unique identifiers for the music videos.
ids[genres] [string]	The unique identifiers for the genres.
ids[curators] [string]	The unique identifiers for the curators.
ids[artists] [string]	The unique identifiers for the artists.
ids[apple-curators] [string]	The unique identifiers for the Apple Music curators.
ids[albums] [string]	The unique identifiers for the albums.
ids[activities] [string]	The unique identifiers for the activities.

Response Codes

200 ResourceCollection Response	**OK** The request was successful. Content-Type: application/json
401 UnauthorizedResponse	**Unauthorized** A response indicating an incorrect `Authorization` header.

	500	**Internal Server Error**
ErrorsResponse		A response indicating an error occurred on the server.
		Content-Type: application/json

Discussion

If successful, the HTTP status code is 200 (OK) and the `data` array contains the requested resource object. If unsuccessful, the HTTP status code indicates the error and the details are in the `errors` array. For more information, see Handling Requests and Responses.

Example

Request   Response

```
https://api.music.apple.com/v1/catalog/us?ids[songs]=1564531202&ids[albums]=1577502
```
