`class NSDictionaryController`

A bindings-compatible controller that manages the display and editing of a dictionary of key-value pairs.

`class NSDictionaryControllerKeyValuePair`

A set of methods implemented by arranged objects to give access to information about those objects.

`struct NSBindingName`

Values that specify a binding for certain methods.

`struct NSBindingOption`

`func NSIsControllerMarker(Any?) -> Bool`

Tests whether a given object is special marker object used for indicating the state of a selection in relation to a key.

📄 NSKeyValueBindingCreation

A set of methods that you can use to create and remove bindings between view objects and controllers, or between controllers and model objects.

☰ Binding dictionary keys

These constants define keys in the binding information dictionary.
