Class

ASDiscoveredAccessory

A discovered accessory, for use in creating a customized picker display item.

iOS 26.1+ | iPadOS 26.1+

```
class ASDiscoveredAccessory
```

Overview

When your app's picker uses the <u>filterDiscoveryResults</u> option, you receive <u>ASAccessory EventType.accessoryDiscovered</u> events that contain this type. Use the discovered accessory's Bluetooth properties to create a new <u>ASDiscoveredDisplayItem</u>, incorporating traits like a custom accessory name or a newly downloaded product image. You can then add this item to the picker to allow the person using the app to set up the accessory.

Topics

Working with accessory properties

var **bluetoothAdvertisementData:** [AnyHashable : Any]?

The Bluetooth advertisement data from the discovered accessory.

var **bluetoothRSSI:** Int?

The Bluetooth RSSI (Received Signal Strength Indicator) value from the discovered accessory.
