Class

# MEMessage

An object that contains information about a mail message, such as the subject, addressees, date sent, and the message contents.

macOS 12.0+

```
class MEMessage
```

# Topics

## Accessing the Sender and Recipients

var **fromAddress**: MEEmailAddress

The sender's email address.

var **toAddresses**: [MEEmailAddress]

An array of email addresses for the primary recipients of the message.

var **ccAddresses**: [MEEmailAddress]

An array of email addresses for the secondary recipients of the message.

var **bccAddresses**: [MEEmailAddress]

An array of email addresses for the concealed tertiary recipients of the message.

var **replyToAddresses**: [MEEmailAddress]

An array of email addresses to use when replying to the message.

var **allRecipientAddresses**: [MEEmailAddress]

An array of email addresses for all recipients of the message.

## Accessing the Message Subject

`var subject: String`

    The subject of the message.

## Accessing Message Content

`var headers: [String : [String]]?`

    A dictionary that contains the message's header values.

`var rawData: Data?`

    The raw RFC 2822 header and body content of the message.

## Accessing Message State

`var state: MEMessageState`

    The state of the mail message.

## Instance Properties

`var encryptionState: MEMessageEncryptionState`
